PART I: HEALTH PROFESSIONAL INFORMATION

1 INDICATIONS

SKYRIZI (risankizumab injection) is indicated for:

- the treatment of adult patients with moderate to severe plaque psoriasis who are candidates for systemic therapy or phototherapy.
- the treatment of adult patients with active psoriatic arthritis. Skyrizi can be used alone or in combination with a conventional non-biologic disease-modifying antirheumatic drug (cDMARD) (e.g., methotrexate).

1.1 Pediatrics (< 18 years of age)

Skyrizi is not indicated in the pediatric population, as the efficacy and safety of Skyrizi have not been evaluated in patients less than 18 years of age.

1.2 Geriatrics (≥ 65 years of age)

Limited data are available to Health Canada regarding this age group. Of the 2234 patients with plaque psoriasis exposed to Skyrizi in Phase 2 and Phase 3 clinical trials, 243 (11%) were 65 years or older and 24 (1%) patients were 75 years or older (see **10.3 Pharmacokinetics**).

2 CONTRAINDICATIONS

- Skyrizi is contraindicated in patients who are hypersensitive to risankizumab or to any ingredient in the formulation or component of the container. For a complete listing, see **6 DOSAGE FORMS, STRENGTHS, COMPOSITION AND PACKAGING**.

3 SERIOUS WARNINGS AND PRECAUTIONS BOX

Not applicable.

4 DOSAGE AND ADMINISTRATION

Skyrizi should be initiated and supervised by specialist physicians experienced in the diagnosis and treatment of plaque psoriasis or psoriatic arthritis and familiar with the Skyrizi efficacy and safety profile.

4.1 Dosing Considerations

- Patients may self-inject Skyrizi if their physician determines that it is appropriate and with medical follow-up, as necessary, after proper training in subcutaneous injection technique. Patients should read the **Instructions for Use** before administration.
- If using Skyrizi 75 mg/ 0.83 mL (90 mg/mL) patients should be instructed to inject 2 pre-filled syringes for the full 150 mg dose. If using Skyrizi 150 mg/1 mL (150 mg/mL), patients should be instructed to inject 1 pre-filled syringe or pre-filled pen for the full 150 mg dose.
- Each pre-filled pen and pre-filled syringe is for single use only.

4.2 Recommended Dose and Dosage Adjustment

Plaque Psoriasis

- The recommended dose of Skyrizi is 150 mg administered by subcutaneous injection at Week 0, Week 4, and every 12 weeks thereafter.

Psoriatic Arthritis

- The recommended dose of Skyrizi is 150 mg administered by subcutaneous injection at Week 0, Week 4, and every 12 weeks thereafter.

Pediatrics (< 18 years of age)

Skyrizi is not indicated in the pediatric population, as the efficacy and safety of Skyrizi have not been evaluated in patients younger than 18 years.

Geriatrics (≥ 65 years of age)

Limited data are available to Health Canada regarding this age group. No dosage adjustment is required (see **1.2 Geriatrics (≥ 65 years of age)** and **10.3 Pharmacokinetics**).

Renal or Hepatic Impairment

No specific studies were conducted to assess the effect of hepatic or renal impairment on the pharmacokinetics of Skyrizi (see **10.3 Pharmacokinetics**).

4.3 Reconstitution

Not applicable.

4.4 Administration

Skyrizi is administered by subcutaneous injection. Patients should not inject into areas where the skin is tender, bruised, erythematous, indurated or affected by psoriasis. Skyrizi is intended for use under the guidance and supervision of a physician. Skyrizi may be administered by a healthcare professional or a patient or caregiver after proper training in subcutaneous injection technique.

For patients that require two injections for the full 150 mg dose, the injections should be administered at different anatomic locations (such as thighs or abdomen). Administration of Skyrizi in the upper, outer arm may only be performed by a healthcare professional or caregiver.

Preparation for Use

Before injecting the pre-filled pen, patients should remove the carton from the refrigerator and allow it to reach room temperature out of direct sunlight (30 to 90 minutes) without removing the pre-filled pen from the carton.

For a more comfortable injection, before injecting the pre-filled syringe, patients may remove the carton from the refrigerator and allow to reach room temperature out of direct sunlight (15 to 30 minutes) without removing the pre-filled syringe from the carton.

Visually inspect Skyrizi for particulate matter and discolouration prior to administration. The 150 mg/1 mL (150 mg/mL) solution is colourless to yellow and clear to slightly opalescent. The 75 mg/0.83 mL (90 mg/mL) solution is colourless to slightly yellow and clear to slightly opalescent. It may contain a few

translucent to white product-related particles. Do not use if the solution is cloudy or discoloured, or contains large particles.

4.5 Missed Dose

If a dose is missed, administer the dose as soon as possible. Thereafter, resume dosing at the regular scheduled time.

5 OVERDOSAGE

In the event of overdose, it is recommended that the patient be monitored for any signs or symptoms of adverse reactions and appropriate symptomatic treatment be instituted immediately.

Single intravenous doses up to 1200 mg and single subcutaneous doses up to 300 mg of risankizumab have been administered in clinical trials without dose-limiting toxicity (see **4.2 Recommended Dose and Dosage Adjustment**).

For management of a suspected drug overdose, contact your regional poison control centre.

6 DOSAGE FORMS, STRENGTHS, COMPOSITION AND PACKAGING

Table 1 – Dosage Forms, Strengths, Composition and Packaging

Route of Administration	Dosage Form / Strength/Composition	Non-medicinal Ingredients
subcutaneous	Solution for injection/ 150 mg/mL 150 mg risankizumab in 1 mL solution	acetic acid, polysorbate 20, sodium acetate trihydrate, trehalose dihydrate, and water for injection
	Solution for injection / 90 mg/mL / 75 mg risankizumab in 0.83 mL solution	disodium succinate hexahydrate, polysorbate 20, sorbitol, succinic acid, and water for injection

Description

Skyrizi (risankizumab injection) 150 mg/1 mL (150 mg/mL)

Skyrizi is supplied as a solution for injection in a pre-filled pen or pre-filled syringe with needle guard containing 150 mg risankizumab in 1 mL sterile solution. Skyrizi does not contain preservatives; therefore, each pre-filled pen or pre-filled syringe is for single use only.

Skyrizi 150 mg/1 mL (150 mg/mL) is available in cartons containing 1 pre-filled pen or 1 pre-filled syringe.

Not made with natural rubber latex.

Skyrizi (risankizumab injection) 75 mg/0.83 mL (90 mg/mL)

Skyrizi is supplied as a solution for injection in a pre-filled syringe with needle guard. Each pre-filled syringe contains 75 mg risankizumab in 0.83 mL sterile solution. Skyrizi does not contain preservatives; therefore, each pre-filled syringe is for single use only.

Skyrizi 75 mg/0.83 mL (90 mg/mL) is available in cartons containing 2 pre-filled syringes.

Not made with natural rubber latex.

7 WARNINGS AND PRECAUTIONS

General

Infections

Skyrizi (risankizumab injection) may increase the risk of infections (see **8.2 Clinical Trial Adverse Reactions**).

Skyrizi should not be given to patients with any clinically important active infection until the infection resolves or is adequately treated. In patients with a chronic infection or a history of recurrent infection, the risks and benefits should be considered prior to prescribing Skyrizi. Patients should be instructed to seek medical advice if signs or symptoms of a clinically important infection occur. If a patient develops such an infection or is not responding to standard therapy for the infection, the patient should be closely monitored and Skyrizi should not be administered until the infection resolves.

In clinical trials in plaque psoriasis, infections were reported in 22% of patients in the Skyrizi 150 mg group versus 15% of patients in the placebo group through 16 weeks of treatment. The most common type of infection reported in patients that received Skyrizi 150 mg were upper respiratory tract infections (see **8.2 Clinical Trial Adverse Reactions**).

Tuberculosis

Skyrizi must not be given to patients with active tuberculosis (TB). Evaluate patients for TB infection according to the Canadian Tuberculosis Standards prior to initiating treatment with Skyrizi. Initiate treatment of latent TB prior to initiating Skyrizi. Consider anti-TB therapy prior to initiating Skyrizi in patients with a past history of latent or active TB in whom an adequate course of treatment cannot be confirmed. Patients receiving Skyrizi should be monitored for signs and symptoms of active TB during and after the treatment.

Immune

Vaccinations

Prior to initiating therapy with Skyrizi, completion of all appropriate immunizations should be considered according to current immunization guidelines. Skyrizi should not be used with live vaccines. No data are available on the response to live or inactive vaccines.

If a patient has received live vaccination (viral or bacterial), it is recommended to wait at least four weeks prior to starting treatment with Skyrizi.

Reproductive Health: Female and Male Potential

- **Fertility**

The effect of Skyrizi on human fertility has not been studied. In addition, no dedicated fertility studies have been conducted in animals. In 26-week repeat-dose toxicity studies conducted in cynomolgus monkeys, no adverse effects on male or female reproductive organs or on male fertility-related parameters were observed (see **16 NON-CLINICAL TOXICOLOGY**).

Sensitivity/Resistance

As with all therapeutic proteins including Skyrizi, there is potential for anaphylaxis. If an anaphylactic or other serious allergic reaction occurs, immediately discontinue the administration of Skyrizi and initiate appropriate medical treatment.

Inform patients/caregivers of the signs and symptoms of anaphylaxis and hypersensitivity reactions, and instruct them to seek immediate medical care if signs and symptoms occur.

7.1 Special Populations

7.1.1 Pregnant Women

The use of Skyrizi in pregnant women has not been studied.

In an enhanced pre- and post-natal developmental study conducted in cynomolgus monkeys, fetal losses and neonatal deaths were observed following weekly subcutaneous injections of risankizumab to pregnant monkeys from the beginning of organogenesis until parturition at exposure values that were 13- to 99-fold greater than the human exposure levels. No adverse developmental effects were observed in surviving monkey infants. In addition, risankizumab was detected in monkey infant serum (see **16 NON-CLINICAL TOXICOLOGY**).

Animal studies are not always predictive of human response; therefore, it is unknown whether Skyrizi can cause fetal harm when administered to a pregnant woman.

Women of childbearing potential should use adequate contraception while using Skyrizi and for at least 20 weeks after the last Skyrizi dose.

7.1.2 Breast-feeding

There are no data on the presence of risankizumab in human milk, the effects on the breastfed infant, or the effects on milk production. Because human immunoglobulin G (IgG) is secreted into human milk, precaution should be exercised. The developmental and health benefits of breast-feeding should be considered, as well as any potential adverse effects on the breastfed infant.

7.1.3 Pediatrics (< 18 years of age)

Skyrizi is not indicated in the pediatric population, as the efficacy and safety of Skyrizi have not been evaluated in patients less than 18 years of age.

7.1.4 Geriatrics (≥ 65 years of age)

Limited data are available regarding this age group (see **1.2 Geriatrics (≥ 65 years of age)** and **4.2 Recommended Dose and Dosage Adjustment**).

8 ADVERSE REACTIONS

8.1 Adverse Reaction Overview

The most frequently reported ($\geq 10\%$) adverse drug reactions were upper respiratory tract infections. Most of the reactions were mild or moderate in severity.

In the placebo-controlled period of the phase 3 studies, the proportion of patients who discontinued treatment due to adverse events was 0.5% in Skyrizi 150 mg-treated patients and 3.0% in placebo-treated patients in plaque psoriasis studies, and 0.7% in Skyrizi 150 mg-treated patients and 1.4% in placebo-treated patients in psoriatic arthritis studies. Serious adverse events were reported in 2.4% of Skyrizi 150 mg-treated patients and 4.0% of placebo-treated patients in plaque psoriasis studies, and 3.0% of Skyrizi 150 mg-treated patients and 4.4% of placebo-treated patients in psoriatic arthritis studies.

8.2 Clinical Trial Adverse Reactions

Clinical trials are conducted under very specific conditions. The adverse reaction rates observed in the clinical trials; therefore, may not reflect the rates observed in practice and should not be compared with the rates in the clinical trials of another drug. Adverse reaction information from clinical trials may be useful in identifying and approximating rates of adverse drug reactions in real-world use.

Adverse Reactions in Plaque Psoriasis Trials

A total of 2234 patients were treated with Skyrizi in clinical development studies in plaque psoriasis, representing 2167 patient years of exposure. Of these, 1208 (54%) patients with psoriasis were exposed to Skyrizi for at least one year. Safety results from 111 patients exposed to Skyrizi for 104 weeks in the IMMANCE study are consistent with the safety profile of Skyrizi in other psoriasis studies.

Data from placebo- and active-controlled studies were pooled to evaluate the safety of Skyrizi for up to 16 weeks. In total, 1306 patients were evaluated in the Skyrizi 150 mg group.

Table 2 summarizes the adverse reactions that occurred at a rate of at least 1% and at a higher rate in the Skyrizi group than the placebo group during the 16-week controlled period of pooled clinical studies.

Table 2 – Adverse Reactions Occurring in ≥ 1% of Patients with Plaque Psoriasis through Week 16

	Skyrizi¹ N = 1306 n (%)	Placebo² N = 300 n (%)	Ustekinumab³ N = 199 n (%)	Adalimumab⁴ N = 304 n (%)
General Disorders and Administration Site Conditions

Infections and Infestations				
Upper respiratory tract infections ⁷	170 (13.0)	29 (9.7)	25 (12.6)	42 (13.8)
Urinary tract infection	14 (1.1)	2 (0.7)	5 (2.5)	3 (1.0)
Tinea infections ⁸	15 (1.1)	1 (0.3)	0 (0)	2 (0.7)
Nervous System Disorders				
Headache ⁹	46 (3.5)	6 (2.0)	7 (3.5)	20 (6.6)
Skin and Subcutaneous Tissue Disorders				
Pruritus	19 (1.5)	4 (1.3)	3 (1.5)	10 (3.3)

1 Includes data from ULTIMMA-1, ULTIMMA-2, IMMSTANCE and IMMVENT studies. Patients received Skyrizi 150 mg at Week 0 and Week 4.

2 Includes data from ULTIMMA-1, ULTIMMA-2 and IMMSTANCE studies. Patients received placebo at Week 0 and Week 4.

3 Includes data from ULTIMMA-1 and ULTIMMA-2 studies. Patients received a weight-based dose of ustekinumab: 45 mg (weight ≤ 100 kg) or 90 mg (weight > 100 kg) at Week 0 and Week 4.

4 Includes data from IMMVENT study. Patients received adalimumab 80 mg at Week 0, 40 mg at Week 1, then every other week (q2wk) thereafter.

5 Includes: fatigue, asthenia

6 Includes: injection site bruising, erythema, extravasation, hematoma, hemorrhage, infection, inflammation, irritation, pain, pruritus, reaction, swelling, warmth

7 Includes: respiratory tract infection (viral, bacterial, or unspecified), sinusitis (including acute), rhinitis, nasopharyngitis, pharyngitis (including viral), tonsillitis

8 Includes: tinea pedis, tinea cruris, body tinea, tinea versicolor, tinea manuum, tinea infection, onychomycosis

9 Includes: headache, tension headache, sinus headache, cervicogenic headache

Adverse Reactions in Psoriatic Arthritis Trials

Overall, the safety profile observed in patients with psoriatic arthritis treated with Skyrizi was consistent with the safety profile observed in patients with plaque psoriasis.

A total of 1,407 patients were treated with Skyrizi in Phase 3 clinical development studies in psoriatic arthritis. Data from two placebo- controlled studies, KEEPSAKE1 and KEEPSAKE2, were pooled to evaluate the safety of Skyrizi for up to 24 weeks.

Table 3 summarizes the adverse reactions that occurred at a rate of at least 1% and at a higher rate in the Skyrizi group than the placebo group during the 24-week controlled period of pooled studies KEEPSAKE1 and KEEPSAKE2.

Table 3 – Adverse Reactions Occurring in ≥ 1% of Patients with Psoriatic Arthritis through Week 24

	KEEPSAKE1 and KEEPSAKE2	
	Skyrizi N =707 n (%)	Placebo N =700 n (%)
Infections and Infestations¹		
Upper respiratory tract infection	71 (10.0)	67 (9.6)

¹ includes: acute sinusitis, nasopharyngitis, pharyngitis, respiratory tract infection, respiratory tract infection viral, rhinitis, sinusitis, tonsillitis, upper respiratory tract infection, upper respiratory tract infection bacterial, viral pharyngitis, viral upper respiratory tract infection

Infections

Plaque Psoriasis

In the first 16 weeks, infections occurred in 22.1% (288/1306) of the Skyrizi 150 mg group (90.8 events per 100 patient-years) compared with 14.7% (44/300) of the placebo group (56.5 events per 100 patient-years). The majority of cases were non-serious and mild to moderate in severity and did not lead to discontinuation of Skyrizi. Serious infections were reported in 5 (0.4%) Skyrizi 150 mg-treated patients and in 1 (0.3%) placebo-treated patient (see **7 WARNINGS AND PRECAUTIONS**).

Over the entire psoriasis program including long-term exposure to Skyrizi 150 mg, the rate of infections was 48% (759/1590, 79 events per 100 patient-years); the rate of serious infections was 1.4% (22/1590, 1.6 events per 100 patient-years).

Psoriatic Arthritis

In the first 24 weeks, infections occurred in 19.0% of the Skyrizi 150 mg group compared with 19.3% of the placebo group. The most common infection adverse events in the Skyrizi group (≥ 1% of subjects) were upper respiratory tract infection (4.1%), nasopharyngitis (3.5%), and gastroenteritis (1.0%). The majority of infections were non-serious and mild to moderate in severity and did not lead to discontinuation of Skyrizi. Serious infections were reported in 1.0% of Skyrizi 150 mg-treated patients and in 1.6% of placebo-treated patients.

Immunogenicity

As with all therapeutic proteins, there is the potential for immunogenicity with Skyrizi. Immunogenicity tests are generally product-specific and are highly dependent on the sensitivity and specificity of the assay. Comparison of incidence of antibodies between products by different tests may be misleading.

Plaque Psoriasis

For patients treated with Skyrizi at the recommended clinical dose for up to 52 weeks in psoriasis clinical trials, treatment-emergent anti-drug antibodies were detected in 24% (263/1079) of evaluated patients. Of the patients who developed antidrug antibodies, approximately 57% had antibodies that were classified as neutralizing which equates to 14% (150/1079) of all patients treated with Skyrizi.

Antibodies to risankizumab including neutralizing antibodies were not generally associated with changes in clinical response or safety. Among the few patients (approximately 1%; 7/1000 at Week 16 and 6/598 at Week 52) with high antibody titers (> 128), clinical response appeared to be reduced.

Psoriatic Arthritis

For patients treated with Skyrizi at the recommended clinical dose for up to 28 weeks in psoriatic arthritis clinical trials, treatment-emergent anti-drug antibodies and neutralizing antibodies were detected in 12.1% (79/652) and 0% (0/652) of evaluated patients, respectively. There was no evidence of impact of anti-drug antibody development on efficacy in the clinical studies. A higher proportion of subjects with anti-drug antibodies experienced hypersensitivity reactions (6.3% (5/79)) and injection site reactions (2.5% (2/79)) compared to subjects without anti-drug antibodies (3.8% (22/574) with hypersensitivity reactions and 0.7% (4/574) with injection site reactions). None of these hypersensitivity and injection site reactions led to discontinuation of risankizumab.

8.3 Less Common Clinical Trial Adverse Reactions

Plaque Psoriasis

Adverse reactions that occurred at rates less than 1% in the placebo-controlled period of the plaque psoriasis studies ULTIMMA-1, ULTIMMA-2, IMMSTANCE and IMMVENT through Week 16 included:

Infections and Infestations: Folliculitis

Psoriatic Arthritis

Adverse reactions that occurred at rates less than 1% in the placebo-controlled period of the psoriatic arthritis studies KEEPSAKE1 and KEEPSAKE2 through Week 24 included:

Infections and Infestations: Folliculitis, tinea infections (which includes onychomycosis, tinea cruris)

Skin and Subcutaneous Tissue Disorders: Injection site reactions (which includes Injection site erythema, Injection site pruritus, Injection site swelling)

9 DRUG INTERACTIONS

9.2 Drug Interactions Overview

Skyrizi is not expected to undergo metabolism by hepatic enzymes or renal elimination. Drug interactions between Skyrizi and substrates/inhibitors/inducers of drug metabolizing enzymes are not expected.

9.4 Drug-Drug Interactions

Live Vaccines

Live vaccines should not be given while a patient is undergoing therapy with Skyrizi (see **7 WARNINGS AND PRECAUTIONS**).

Immunosuppression Therapy

The safety and efficacy of Skyrizi in combination with immunosuppressant drugs, including biologics, or with phototherapy, have not been evaluated.

Interactions with CYP450 Substrates

The formation of cytochrome P450 (CYP) enzymes can be altered by increased levels of certain cytokines (e.g., interleukin [IL]- β , IL-6, tumor necrosis factor, and interferon) during chronic inflammation. A drug interaction study was conducted in patients with plaque psoriasis to assess the effect of repeated administration of risankizumab injection on the pharmacokinetics of cytochrome P450 (CYP) sensitive probe substrates. The exposure of caffeine (CYP1A2 substrate), warfarin (CYP2C9 substrate), omeprazole (CYP2C19 substrate), metoprolol (CYP2D6 substrate) and midazolam (CYP3A substrate) following administration of risankizumab injection were comparable to their exposures prior to risankizumab injection, indicating no interactions through these enzymes.

Population pharmacokinetic analyses indicated that risankizumab exposure was not impacted by concomitant medications (metformin, atorvastatin, lisinopril, amlodipine, ibuprofen, acetylsalicylate, levothyroxine and vitamin B complex) used by some patients with plaque psoriasis during the clinical studies. Similarly, risankizumab exposure was not impacted by concomitant use of methotrexate based on population pharmacokinetic analyses in patients with psoriatic arthritis.

9.5 Drug-Food Interactions

Interactions with food have not been studied.

9.6 Drug-Herb Interactions

Interactions with herbal products have not been studied.

9.7 Drug-Laboratory Test Interactions

Interactions with laboratory tests have not been studied.

10 CLINICAL PHARMACOLOGY

10.1 Mechanism of Action

Risankizumab is a humanized immunoglobulin G1 (IgG1) monoclonal antibody that selectively binds with high affinity to the p19 subunit of human interleukin 23 (IL-23) cytokine and inhibits IL-23 signalling in cell-based assays, including the release of the pro-inflammatory cytokine, IL-17. IL-23 is a naturally occurring cytokine that is involved in inflammatory and immune responses. Risankizumab was shown to not bind to human IL-12 in vitro.

10.2 Pharmacodynamics

In a study of patients with psoriatic arthritis following treatment with risankizumab at 150 mg administered subcutaneously at Week 0, Week 4, and every 12 weeks thereafter, the serum levels of IL-17A, IL-17F, and IL-22 were reduced compared to baseline based on exploratory analyses of these pharmacodynamic markers.

The relationship between these pharmacodynamic markers and the mechanism(s) by which

risankizumab exerts its clinical effects is unknown.

10.3 Pharmacokinetics

The pharmacokinetics of risankizumab was similar between patients with plaque psoriasis and psoriatic arthritis.

Risankizumab exhibited linear pharmacokinetics with dose-proportional increase in exposure across dose ranges of 18 to 300 mg and 0.25 to 1 mg/kg administered subcutaneously, and 200 to 1200 mg and 0.01 to 5 mg/kg administered intravenously.

Absorption

Following subcutaneous dosing of risankizumab, peak plasma concentrations were achieved between 3 to 14 days after dosing with an estimated absolute bioavailability of 89% based on population pharmacokinetic analyses.

Following a single 300 mg subcutaneous injection in healthy Caucasian subjects, risankizumab reached a mean (\pm SD) maximum plasma concentration (C_{max}) of 20.4 ± 8.02 mcg/mL by approximately 7 days post dose.

With the dosing regimen in patients with psoriasis (150 mg at Week 0, Week 4, and every 12 weeks thereafter), population pharmacokinetic estimated mean (\pm SD) steady-state peak and trough plasma concentrations are 11.9 ± 3.06 and 1.91 ± 1.17 mcg/mL, respectively.

Bioequivalence was demonstrated between a single risankizumab 150 mg/1 mL (150 mg/mL) injection and two risankizumab 75 mg/0.83 mL (90 mg/mL) injections in pre-filled syringe. Bioequivalence was also demonstrated between risankizumab 150 mg/1 mL (150 mg/mL) pre-filled syringe and pre-filled pen.

Distribution:

Based on population pharmacokinetic analyses, in a typical 90 kg patient with psoriasis, the steady-state volume of distribution (V_{ss}) was 11.2 L.

Metabolism:

The exact pathway through which risankizumab is metabolized has not been characterized. Therapeutic IgG monoclonal antibodies are typically degraded into small peptides and amino acids via catabolic pathways in the same manner as endogenous IgGs.

Elimination

Based on population pharmacokinetic analyses, the systemic clearance (CL) of risankizumab was 0.31 L/day and terminal elimination half-life ($T_{1/2}$) was 28 days for a typical 90 kg patient with psoriasis. Following a single 300 mg subcutaneous injection in healthy Caucasian subjects, risankizumab mean $T_{1/2}$ was approximately 29 days.

Special Populations and Conditions

- **Pediatrics**

The pharmacokinetics of risankizumab in pediatric patients has not been evaluated.

- **Geriatrics**

Of the 2234 patients with plaque psoriasis exposed to Skyrizi, a total of 243 were 65 years or older, and 24 patients were 75 years or older. No overall differences in risankizumab exposure, safety and effectiveness were observed between older and younger patients who received Skyrizi.

- **Sex**

The clearance of risankizumab was not significantly influenced by gender in adult patients with plaque psoriasis or psoriatic arthritis.

- **Ethnic Origin**

No clinically meaningful differences in risankizumab exposure were found in Chinese or Japanese compared with Caucasian in a clinical pharmacokinetic study in healthy subjects. The number of patients from the Asian region is limited; however, the data from subgroup analyses by region are consistent with the overall results in pivotal clinical studies.

- **Hepatic Insufficiency**

No specific studies have been conducted to determine the effect of hepatic impairment on the pharmacokinetics of risankizumab. As an IgG1 monoclonal antibody, risankizumab is not expected to undergo metabolism via hepatic cytochrome P450 enzymes.

- **Renal Insufficiency**

No specific studies have been conducted to determine the effect of renal impairment on the pharmacokinetics of risankizumab. As an IgG1 monoclonal antibody, risankizumab is not expected to undergo metabolism via renal elimination.

- **Obesity**

Risankizumab clearance and volume of distribution increase as body weight increases. Data from a limited number of patients indicate that high body weight (>130 kg) may result in reduced efficacy.

11 STORAGE, STABILITY AND DISPOSAL

Temperature:

Store in a refrigerator between 2 to 8 °C (36 to 46 °F). Do not freeze.

Light:

Keep in the outer carton in order to protect from light.

Others:

Keep out of reach and sight of children.

12 SPECIAL HANDLING INSTRUCTIONS

Any unused medicinal product or waste material should be disposed of in accordance with local requirements.

PART II: SCIENTIFIC INFORMATION

13 PHARMACEUTICAL INFORMATION

Drug Substance

Proper name:	Risankizumab
Chemical name:	Not applicable. Risankizumab is an immunoglobulin.
Molecular formula and molecular mass:	Based on the amino acid sequence, the molecular formula of the disulfide bonded risankizumab molecule without post-translational modifications is $C_{6476}H_{9992}N_{1720}O_{2016}S_{44}$. The predicted molecular weight of aglycosylated risankizumab is approximately 146 kDa.
Structural formula:	Risankizumab is a recombinant humanized IgG1 kappa immunoglobulin comprising two heavy chains, and two light chains. The heavy and light chains are covalently linked by a single disulfide bond and the heavy chains are linked to each other by two disulfide bonds. Each heavy chain contains a single N-linked glycosylation site.
Physicochemical properties:	<p>Risankizumab is supplied as a sterile, preservative-free solution for subcutaneous administration.</p> <p>The 150 mg/1 mL (150 mg/mL) solution is colourless to yellow and clear to slightly opalescent, with a pH of 5.7. The 75 mg/0.83 mL (90 mg/mL) solution is colourless to slightly yellow and clear to slightly opalescent, with a pH of 6.2.</p> <p>The solution may contain a few translucent to white product-related particles.</p>

14 CLINICAL TRIALS

14.1 Trial Design and Study Demographics

Plaque Psoriasis

The efficacy and safety of Skyrizi (risankizumab injection) was assessed in 2109 adult patients with moderate to severe plaque psoriasis in four multicenter, randomized, double-blind studies (ULTIMMA-1, ULTIMMA-2, IMMANCE, and IMMVENT). Enrolled patients were 18 years of age and older with plaque psoriasis who had a body surface area (BSA) involvement of $\geq 10\%$, a static Physician Global Assessment (sPGA) score of ≥ 3 (moderate psoriasis) on a 5-point severity scale, a Psoriasis Area and Severity Index (PASI) score ≥ 12 , and who were candidates for systemic therapy or phototherapy. Patients with guttate, erythrodermic, or pustular psoriasis were excluded from the studies.

ULTIMMA-1 and ULTIMMA-2 enrolled 997 patients (598 randomized to Skyrizi 150 mg, 199 to ustekinumab 45 mg [\leq 100 kg body weight] or 90 mg [$>$ 100 kg body weight] and 200 to placebo). Patients received treatment at Week 0, Week 4, and every 12 weeks thereafter.

IMMHANCE enrolled 507 patients (407 randomized to Skyrizi 150 mg and 100 to placebo). Patients received treatment at Week 0, Week 4 and every 12 weeks thereafter. Patients who were originally on Skyrizi and had a sPGA response of clear or almost clear (0/1) at Week 28 were re-randomized to continue Skyrizi every 12 weeks or have treatment withdrawn.

IMMVENT enrolled 605 patients (301 randomized to Skyrizi and 304 to adalimumab). Patients randomized to Skyrizi received 150 mg of treatment at Week 0, Week 4 and every 12 weeks thereafter. Patients randomized to adalimumab received 80 mg at Week 0, 40 mg at Week 1 and 40 mg every other week through Week 15. Starting at Week 16, patients who were receiving adalimumab continued or switched treatment based on response:

- $<$ PASI 50 were switched to Skyrizi
- PASI 50 to $<$ PASI 90 were re-randomized to either continue adalimumab or switch to Skyrizi
- PASI 90 continued to receive adalimumab

In all four Phase 3 studies, randomization was stratified by weight (\leq 100 kg versus $>$ 100 kg) and by prior exposure to tumor necrosis factor (TNF) antagonists (0 versus \geq 1).

In ULTIMMA-1 and ULTIMMA-2, the co-primary endpoints were the proportions of patients who achieved PASI 90 and sPGA of 0/1 at Week 16, comparing Skyrizi to placebo. In IMMANCE, the co-primary endpoints at Week 16 were the proportions of patients who achieved PASI 90 and sPGA of 0/1, comparing Skyrizi to placebo. In IMMVENT, the co-primary endpoints at Week 16 were the proportions of patients who achieved PASI 90 and sPGA of 0/1, comparing Skyrizi to adalimumab.

Other endpoints included the proportion of patients who achieved PASI 75, PASI 100, and sPGA of clear (0). Patient-reported outcomes were assessed based on the Dermatology Life Quality Index (DLQI) and Psoriasis Symptom Scale (PSS).

Patient demographics (**Table 4**) and baseline disease characteristics were generally balanced across treatment groups and studies. The majority of patients who were randomized to Skyrizi were male (69.5%) and white (78.1%). Overall, patients had a median baseline PASI score of 17.8 and a median BSA of 20.0%. Baseline sPGA score was severe in 19.3% of patients. A total of 9.8% of study patients had a history of diagnosed psoriatic arthritis.

Across all studies, 38.1% of patients had received prior phototherapy, 48.3% had received prior non-biologic systemic therapy, and 42.1% had received prior biologic therapy for the treatment of psoriasis. Of the patients who had received prior biologic therapy, 23.7% had received at least one anti-tumor necrosis factor (TNF) alpha agent.

Table 4 – Summary of Patient Demographics for Clinical Trials in Plaque Psoriasis

Study #	Trial Design	Dosage, Route of Administration, and Schedule ^a	Number of Patients	Mean Age (Range) Years	Sex n (%)
ULTIMMA-1	Phase 3, randomized, PBO and active-controlled, DB, double dummy, parallel study	RZB 150 mg SC Wks 0, 4, then q12w starting at Wk 16; UST 45 mg SC (\leq 100 kg) or 90 mg SC ($>$ 100 kg) Wks 0, 4, then q12w starting at Wk 16; PBO SC Wks 0, 4, then RZB 150 mg q12w starting at Wk 16	RZB: 304 UST: 100 PBO: 102	48.1 (19–85)	Female 145 (28.7) Male 361 (71.3)
ULTIMMA-2	Phase 3, randomized, PBO and active-controlled, DB, double dummy, parallel study	RZB 150 mg SC Wks 0, 4, then q12w starting at Wk 16; UST 45 mg SC (\leq 100 kg) or 90 mg SC ($>$ 100 kg) Wks 0, 4, then q12w starting at Wk 16; PBO SC Wks 0, 4, then RZB 150 mg q12w starting at Wk 16	RZB: 294 UST: 99 PBO: 98	46.7 (19–76)	Female 155 (31.6) Male 336 (68.4)
IMMHANCE	Phase 3, randomized, DB, PBO-controlled study with re-randomization at Wk 28 to RZB or PBO based on response	RZB 150 mg SC Wks 0, 4, then q12w starting at Wk 16; PBO SC Wks 0, 4, then RZB q12w starting at Wk 16	RZB: 407 PBO: 100	49.2 (19–80)	Female 151 (29.8) Male 356 (70.2)
IMMVENT	Phase 3, randomized, active-controlled, DB, double dummy, parallel study with re-randomization at Wk 16 to RZB or ADA based on response to ADA	RZB 150 mg SC Wks 0, 4, then q12w starting at Wk 16; ADA 80 mg SC Wk 0, 40 mg SC Wk 1, then 40 mg SC q2w	RZB: 301 ADA: 304	46.2 (18–81)	Female 183 (30.2) Male 422 (69.8)

a-Detailed information about dosage, route of administration and duration of these clinical trials are included above in this section.

Psoriatic Arthritis

The safety and efficacy of Skyrizi were assessed in 1,407 patients in 2 randomized, double-blind, placebo-controlled studies (964 in KEEPSAKE1 and 443 in KEEPSAKE2) in patients 18 years and older with active PsA (**Table 5**).

Patients in these studies had a diagnosis of PsA for at least 6 months based on the Classification Criteria for Psoriatic Arthritis (CASPAR), a median duration of PsA of 4.9 years at baseline, ≥ 5 tender joints and ≥ 5 swollen joints, and active plaque psoriasis or nail psoriasis at baseline. 55.9% of patients had $\geq 3\%$ BSA with active plaque psoriasis. 63.4% and 27.9% of patients had enthesitis and dactylitis, respectively. In KEEPSAKE1 where nail psoriasis was further assessed, 67.3% had nail psoriasis.

In KEEPSAKE1, all patients had a previous inadequate response or intolerance to non-biologic DMARD therapy and were biologic naïve. In KEEPSAKE2, 53.5% of patients had a previous inadequate response or intolerance to non-biologic DMARD therapy and 46.5% of patients had a previous inadequate response or intolerance to biologic therapy.

In both studies, 59.6% of patients received concomitant methotrexate (MTX), 11.6% received concomitant non-biologic DMARDs other than MTX, and 28.9% received Skyrizi monotherapy.

In both studies, patients were randomized to receive Skyrizi 150 mg or placebo at Weeks 0, 4, and 16. Starting from Week 28, all patients received Skyrizi every 12 weeks.

The primary endpoint was the proportion of patients who achieved an American College of Rheumatology (ACR) 20 response at Week 24.

Table 5 – Summary of Patient Demographics for Clinical Trials in Psoriatic Arthritis

Study #	Trial Design	Dosage, Route of Administration, and Schedule ^a	Number of Patients	Mean Age (SD) (Range) Years	Sex n (%)
KEEPSAKE 1	Phase 3, randomized, double-blind, placebo-controlled. • Patients have had an inadequate response or intolerance to at least 1 non-biologic DMARD.	RZB 150 mg SC Wks 0, 4, then q12w PBO SC Wks 0, 4, 16 then RZB 150 mg SC at Wk 24, 28 and q12w	Total: N=964 RZB: 483 PBO: 481	51.3 (12.15) (20, 85)	Female: 478 (49.6) Male: 486 (50.4)
KEEPSAKE 2	Phase 3, randomized, double-blind, placebo-controlled. • Patients have had an inadequate response or intolerance to 1 or 2 biologics and/or at least 1 non-biologic DMARD. 14.2 Study Results

Plaque Psoriasis

The results of the ULTIMMA-1 and ULTIMMA-2 studies are presented in **Table 6** and **Table 7**.

In ULTIMMA-1 and ULTIMMA-2, Skyrizi demonstrated superiority to placebo for the co-primary endpoints of PASI 90 and sPGA of 0/1 (clear or almost clear) at Week 16 (**Table 6**).

Table 6 – Co-Primary Endpoint Results at Week 16 (NRI^a) in Adults with Plaque Psoriasis in ULTIMMA-1 and ULTIMMA-2

	ULTIMMA-1 ^b			ULTIMMA-2 ^b		
	Skyrizi N = 304 n (%)	Placebo N = 102 n (%)	Treatment Difference % (95% CI)	Skyrizi N = 294 n (%)	Placebo N = 98 n (%)	Treatment Difference % (95% CI)

c. $p < 0.001$

Among the patients who had PASI 50 to $<$ PASI 90 with adalimumab at Week 16 and were re-randomized, 66.0% (35/53) and 39.6% (21/53) of patients re-randomized to Skyrizi achieved PASI 90 and PASI 100, respectively, compared with 21.4% (12/56) and 7.1% (4/56) who continued to receive adalimumab at Week 44.

Figure 1 – Proportion of Patients Achieving of PASI 90 After Re-randomization in IMMVENT

ADA/ADA: Patients randomized to adalimumab and continued adalimumab

ADA/RZB: Patients randomized to adalimumab and switched to Skyrizi

$p < 0.05$ at Week 4 and $p < 0.001$ at each time point beginning at Week 8

RZB = risankizumab; ADA = adalimumab

Maintenance and Durability of Response

IMMHANCE patients originally on Skyrizi who were considered responders (achieved sPGA of 0/1 at Week 28) were re-randomized to continue Skyrizi every 12 weeks through Week 88 ($n = 111$) or were withdrawn from therapy ($n = 225$). Among patients who were considered responders and relapsed ($sPGA \geq 3$) following withdrawal from Skyrizi, 83.7% (128/153) regained sPGA of 0/1 response after 16 weeks of re-treatment.

Loss of sPGA of 0/1 was observed as early as 12 weeks after a missed dose. Of those subjects who were re-randomized to withdraw from treatment, 80.9% (182/225) relapsed and the median time to relapse was 42 weeks. No characteristics were identified to predict the time to loss of response or likelihood of regaining response at the individual patient level.

Quality of Life/Patient-Reported Outcomes

In ULTIMMA-1 and ULTIMMA-2, the percentage of patients with Dermatology Life Quality Index (DLQI) of 0/1 (no impact on health-related quality of life) at Week 16 were 65.8% and 66.7%, respectively, in the Skyrizi groups, 7.8% and 4.1%, respectively, in the placebo groups, and 43.0% and 46.5%, respectively, in the ustekinumab groups.

In ULTIMMA-1 and ULTIMMA-2, psoriasis symptoms of itch, pain, redness, and burning were assessed with the Psoriasis Symptom Scale (PSS). In ULTIMMA-1 and ULTIMMA-2, 29.3% and 31.3% of patients, respectively, in the Skyrizi groups, and 2.0% and 0% of patients, respectively, in the placebo groups, reported a PSS total score of 0 at Week 16.

Psoriatic Arthritis

In both Psoriatic Arthritis studies (KEEPSAKE 1 and KEEPSAKE 2), treatment with Skyrizi resulted in clinically meaningful improvements in measures of disease activity compared with placebo at Week 24.

Time to onset of efficacy was rapid across measures with greater responses versus placebo seen as early as Week 4 in 25.7% and 19.6% of patients for ACR20 for KEEPSAKE1 and KEEPSAKE2, respectively.

In both studies, similar responses were seen regardless of concomitant non-biologic DMARD use, number of prior non biologic DMARDs, age, gender, race, and BMI. In KEEPSAKE2, responses were seen regardless of prior biologic therapy.

Table 11 – Efficacy Results in Studies KEEPSAKE1 and KEEPSAKE 2

a. multiplicity-controlled p≤0.001 risankizumab vs placebo comparison				

Dactylitis and Enthesitis

In an analysis of pooled data from studies KEEPSAKE1 and KEEPSAKE 2, 48.4% vs 34.8% of patients treated with Skyrizi vs placebo had resolution of enthesitis (LEI=0) at Week 24, and 68.1% vs 51.0% of patients treated with Skyrizi vs placebo had resolution of dactylitis (LDI=0) at Week 24.

Maintenance of Response

An analysis of observed data at Week 52 suggested that the ACR20, ACR50, and ACR70 responses, MDA, enthesitis resolution, and dactylitis resolution in studies KEEPSAKE1 and KEEPSAKE 2 were maintained at Week 52.

In both studies, improvements were shown in all components of the ACR scores including subject's assessment of pain (see **Table 12**).

High sensitivity C-reactive protein (hs-CRP) mg/L				
Baseline	11.3 (14.1)	11.9 (15.9)	8.2 (17.1)	7.4 (10.9)
Mean change at Week 24	-0.2 (11.7)	-4.3 (12.8)	-0.5 (14.5)	-1.8 (13.4)

SD= Standard Deviation.

- Assessment based on Visual Analog Scale (100 mm) with the left end indicating "no pain" (for patient's assessment of pain), "very well" (for patient global assessment), or "no arthritis activity" (for physician global assessment) and the right end indicating "the worst possible pain" (for patient assessment of pain), "poor" (for patient global assessment), or "extremely active arthritis" (for physician global assessment).
- Disability Index of the Health Assessment Questionnaire; 0 = no difficulty to 3 = inability to perform, measures the patient's ability to perform the following: dressing, arising, eating, walking, hygiene, reaching, gripping, and activities of daily living.

Skin Psoriasis

Among the subset of patients with BSA $\geq 3\%$ at Baseline, a greater percentage of patients in the risankizumab vs. placebo arms of studies KEPPSAKE1 and KEPPSAKE2 achieved PASI 100 response at Week 24. Subjects in the risankizumab arms of both studies also demonstrated greater improvements in BSA-PsO at Week 24.

Nail Psoriasis

Treatment with Skyrizi resulted in improvement in nail psoriasis as measured by modified Nail Psoriasis Severity Index (mNAPSI) and the 5-point Physician's Global Assessment of Fingernail Psoriasis (PGA-F) in patients with nail psoriasis (67.3%) at baseline in KEPPSAKE1 (see **Table 13**).

Table 13 – Nail Psoriasis Efficacy Results in KEPPSAKE1

	placebo N=338	Skyrizi N=309
mNAPSI change from baseline ^b		
Week 24	-5.57	-9.76 ^a
PGA-F change from baseline ^b		
Week 24	-0.4	-0.8 ^a
PGA-F clear/minimal and ≥ 2-grade improvement ^c		
Week 24 n (%)	30 (15.9)	71 (37.8)

a. multiplicity-controlled $p \leq 0.001$ Sskyrizi vs placebo comparison

b. Summarized for patients with baseline nail psoriasis (Placebo N=338; Sskyrizi N=309)

c. Summarized for patients with nail psoriasis and a PGA-F overall global assessment score of 'Mild', 'Moderate' or 'Severe' at Baseline (Placebo N=190; risankizumab N=188).

Radiographic Response

In Study KEPPSAKE1, inhibition of progression of structural damage was assessed radiographically and expressed as the change in modified Total Sharp Score (mTSS) at Week 24, compared with baseline. The mTSS score was modified for psoriatic arthritis by addition of hand distal interphalangeal (DIP) joints. Sskyrizi numerically reduced the mean progression of structural damage at Week 24 compared with placebo (mean change from baseline in mTSS score was 0.23 in the Sskyrizi group compared with 0.32 in the placebo group). The proportion of patients with no radiographic progression (defined as a change from baseline in mTSS ≤ 0) was higher with Sskyrizi (92.4%) compared with placebo (87.7%) at Week 24.

Physical Function and Health Related Quality of Life

In KEPPSAKE1 and KEPPSAKE2, physical function and disability were assessed by the Health Assessment Questionnaire-Disability Index (HAQ-DI), 36-Item Short Form Health Survey (SF-36) V2. Fatigue was assessed using Functional Assessment of Chronic Illness Therapy Fatigue Scale (FACIT-Fatigue).

In KEPPSAKE 1, patients treated with Sskyrizi showed improvement from baseline in physical function as assessed by HAQ-DI at Week 24 (-0.31) compared with placebo (-0.11) (p -value ≤ 0.001). In KEPPSAKE 2,

patients treated with Skyrizi showed improvement from baseline in HAQ-DI at Week 24 (-0.22) compared with placebo (-0.05) (p-value ≤ 0.001). In both studies, a greater proportion of patients achieved a clinically meaningful reduction of at least 0.35 in HAQ-DI score from baseline in the Skyrizi group compared with placebo at Week 24.

In both studies at Week 24, patients treated with Skyrizi also demonstrated improvements in the SF-36 V2 physical component summary scores and in FACIT-Fatigue scores compared with patients who received placebo.

At baseline, psoriatic spondylitis was reported in 19.6% and 19.6% of patients in KEEPSAKE1 and KEEPSAKE2, respectively. Patients with psoriatic spondylitis who were treated with Skyrizi showed improvements from baseline in Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) and Ankylosing Spondylitis Disease Activity (ASDAS) scores compared with placebo at Week 24.

16 NON-CLINICAL TOXICOLOGY

General Toxicology:

In a 26-week repeat-dose toxicity study in cynomolgus monkeys, risankizumab was well-tolerated at weekly doses up to 50 mg/kg. There were no risankizumab-related adverse effects observed, including on cardiovascular, respiratory, and nervous system functions. At the no-observed-adverse-effect level (NOAEL) of 50 mg/kg once weekly, the AUC was approximately 69-fold higher than the AUC for psoriasis patients following the first two 150 mg doses at Weeks 0 and 4 (622 $\mu\text{g}\cdot\text{day/mL}$).

Carcinogenicity:

Carcinogenicity studies have not been conducted with risankizumab.

Genotoxicity:

Genotoxicity studies have not been conducted with risankizumab.

Reproductive and Developmental Toxicology:

In an enhanced pre- and post-natal development toxicity study, pregnant cynomolgus monkeys (21, 22, and 21 in the 0, 5 and 50 mg/kg groups, respectively) were administered weekly subcutaneous doses of risankizumab from the beginning of organogenesis to parturition. Neonatal deaths occurred in the offspring of 1 of 18 control monkeys, 2 of 17 low-dose monkeys, and 3 of 15 high-dose monkeys (AUC_{ss} values were 13- and 99-fold greater, respectively, than the human exposure levels). These neonatal deaths were attributed to maternal neglect, trauma, and/or early or late delivery, although, a drug-related effect could not be ruled out. An increase in the fetal loss rate (spontaneous abortions, including stillbirths) was also observed at both dose levels. While the incidence rate for fetal loss in each dose group was within the historical control range for the testing facility, a drug-related effect could not be ruled out. The clinical significance of these findings is unknown. No risankizumab-related adverse effects, including any effects on neurobehavioural or immunological development, were observed in surviving infants from birth through 6 months of age.

In the infants, mean serum concentrations increased in a dose-dependent manner and were approximately 20 to 90% of the respective maternal concentrations. Following delivery, most maternal animals and all infants from the risankizumab-administered groups had measurable serum concentrations of risankizumab up to 91 days postpartum. Serum concentrations were below

detectable levels at 180 days postpartum in all infants and in all but one maternal animal.

No dedicated fertility studies have been conducted in animals however, in the 26-week repeat-dose toxicity study, histopathology of reproductive organs from female cynomolgus monkeys did not show any relevant adverse finding. In addition, in a separate 26-week repeat dose study conducted in sexually mature male cynomolgus monkeys, no adverse effects on male fertility-related parameters were observed at a dose of 50 mg/kg (98-fold greater than the human exposure level). Specifically, there were no risankizumab-related adverse effects on testicular volume, semen analysis (total sperm count, sperm concentration, sperm motility, and sperm morphology), serum testosterone concentration, reproductive organ weights, or histopathological findings in reproductive organs.

PATIENT MEDICATION INFORMATION

READ THIS FOR SAFE AND EFFECTIVE USE OF YOUR MEDICINE

SKYRIZI®

risankizumab injection

150 mg in 1 mL sterile solution (150 mg/mL) subcutaneous injection

Read this carefully before you start taking Skyrizi and each time you get a refill. This leaflet is a summary and will not tell you everything about this drug. Talk to your healthcare professional about your medical condition and treatment and ask if there is any new information about Skyrizi.

What is Skyrizi used for?

- Skyrizi is a prescription medicine used to treat adults with moderate to severe plaque psoriasis, an inflammatory condition affecting the skin and nails. Plaque psoriasis can cause raised, thick, red and scaly patches (“psoriatic lesions”) that can appear anywhere on your body.
- Skyrizi is used to treat adults with active psoriatic arthritis. Psoriatic arthritis is an inflammatory disease of the joints, usually accompanied by psoriasis. Psoriatic arthritis can cause pain, swelling and stiffness in the joints, in addition to a disruption in daily activities and fatigue. If you have active psoriatic arthritis, you will be given Skyrizi alone or in combination with a conventional Disease Modifying Anti-Rheumatic Drug (DMARD), such as methotrexate.

How does Skyrizi work?

Skyrizi contains the active substance risankizumab. This medicine works by stopping a protein in the body called IL-23, which causes inflammation.

Plaque Psoriasis

Skyrizi reduces inflammation and can therefore help to improve skin clearance and the appearance of nails. It also reduces symptoms of plaque psoriasis such as burning, itching, pain, redness and scaling.

Psoriatic Arthritis

Skyrizi reduces the inflammation and can therefore help to reduce pain, stiffness, and swelling in and around your joints, pain and stiffness in your spine, psoriatic skin rash, psoriatic nail damage, and it may limit damage to the bone and cartilage in your joints. These effects can ease your normal daily activities, reduce tiredness, and improve your quality of life.

What are the ingredients in Skyrizi?

Medicinal ingredient: risankizumab

Non-medicinal ingredients: acetic acid, polysorbate 20, sodium acetate trihydrate, trehalose dihydrate, and water for injection

Skyrizi comes in the following dosage forms:

Pre-filled pen and pre-filled syringe with 150 mg of risankizumab in 1 mL of solution for injection (150 mg/mL).

Skyrizi 150 mg/mL is a clear and colourless to yellow liquid in a pre-filled pen or pre-filled syringe with needle guard. Each carton contains 1 pre-filled pen or 1 pre-filled syringe.

Do not use Skyrizi if:

- You are allergic to risankizumab or any of the other ingredients of this medicine. See **What are the ingredients in Skyrizi?**

To help avoid side effects and ensure proper use, talk to your healthcare professional before you take Skyrizi. Talk about any health conditions or problems you may have, including if you:

- currently have an infection or if you have an infection that keeps coming back. Skyrizi may lower your ability to fight infections and may increase your risk of infections.
- have tuberculosis (TB) or have been in close contact with someone with TB.
- have recently received or plan to receive an immunization (vaccine). You should not be given certain types of vaccines (called 'live vaccines') while using Skyrizi.

Talk to your healthcare professional right away if you have any of the symptoms of serious infection:

- fever, flu-like symptoms, night sweats
- feeling tired or short of breath
- cough
- blood in your phlegm (mucus)
- warm, red or painful skin, sores on your body different from your psoriasis, or a painful skin rash with blisters
- muscle aches
- weight loss

Talk to your healthcare professional right away if you have any of the signs or symptoms of an allergic reaction, including:

- difficulty breathing or swallowing
- swelling of the face, lips, tongue or throat
- severe itching of the skin, with a red rash or raised bumps

Other warnings you should know about:

Skyrizi is not approved for children and adolescents under 18 years of age. This is because it has not been studied in this age group.

If you are pregnant, think you may be pregnant or are planning to have a baby, ask your doctor for advice before using this medicine. This is because it is not known if Skyrizi can harm your unborn baby. If you are a woman of childbearing potential, use adequate contraception while using Skyrizi and for at least 20 weeks after the last Skyrizi dose. Talk to your doctor about your contraception options.

If you are breastfeeding or are planning to breastfeed, talk to your doctor before using this medicine. It is not known if Skyrizi passes into breast milk. You and your doctor should decide if you will breastfeed while using Skyrizi.

Tell your healthcare professional about all the medicines you take, including any drugs, vitamins, minerals, natural supplements or alternative medicines.

How to take Skyrizi:

- Always use this medicine exactly as your doctor, pharmacist or nurse has told you. Check with your doctor, pharmacist or nurse if you are not sure how to use this medicine.
- Skyrizi is injected under your skin (called “subcutaneous injection”).
- You and your doctor, pharmacist or nurse will decide if you should inject Skyrizi yourself. Do not inject yourself with this medicine unless you have been trained by your doctor, pharmacist or nurse. A caregiver may also give your injections after training. The AbbVie Care patient assistance program is also available to you if you require assistance with injections should you prefer nurse-administered injections.
- For the pre-filled pen, take the carton out of the refrigerator and leave it at room temperature, out of direct sunlight, for **30 to 90 minutes** before injecting.
- For a more comfortable injection with the pre-filled syringe, take the carton out of the refrigerator and leave it at room temperature, out of direct sunlight, for **15 to 30 minutes** before injecting.

Read the “**Instructions for Use**” before injecting Skyrizi yourself.

Usual Dose:

The dose is 150 mg given as one 150 mg injection. After the first dose, you will have the next dose 4 weeks later, and then every 12 weeks.

Do not stop using Skyrizi without talking to your doctor first. If you stop treatment, your symptoms may come back.

Overdose:

If you think you have taken too much Skyrizi or the dose has been given sooner than prescribed, talk to your doctor.

Missed dose:

If you forgot to use Skyrizi, inject a dose as soon as you remember. Then, take your next dose at your regular scheduled time. Talk to your doctor if you are not sure what to do.

What are possible side effects from using Skyrizi?

These are not all the possible side effects you may have when taking Skyrizi. If you experience any side effects not listed here, contact your doctor. Your doctor will decide if you can keep using Skyrizi.

Tell your doctor, pharmacist or nurse if you get any of the following side effects:

Very common: may affect more than 1 in 10 people

- upper respiratory infections with symptoms such as sore throat and stuffy nose

Common: may affect up to 1 in 10 people

- feeling tired
- fungal skin infection
- injection site reactions

- headache
- itching
- burning when you urinate or urinating more often than normal

Uncommon: may affect up to 1 in 100 people

- small raised red bumps on the skin

Serious side effects and what to do about them			
Symptom / effect	Talk to your healthcare professional		Stop taking drug and get immediate medical help
	Only if severe	In all cases	
Uncommon			
Serious Infections: Fever, flu-like symptoms, night sweats, cough, blood in your phlegm (mucus), warm, red or painful skin, muscle aches, weight loss		√	√

If you have a troublesome symptom or side effect that is not listed here or becomes bad enough to interfere with your daily activities, tell your doctor, pharmacist or nurse.

Reporting Side Effects

You can report any suspected side effects associated with the use of health products to Health Canada by:

- Visiting the Web page on [Adverse Reaction Reporting](https://www.canada.ca/en/health-canada/services/drugs-health-products/medeffect-canada.html) (<https://www.canada.ca/en/health-canada/services/drugs-health-products/medeffect-canada.html>) for information on how to report online, by mail or by fax; or
- Calling toll-free at 1-866-234-2345.

NOTE: Contact your health professional if you need information about how to manage your side effects. The Canada Vigilance Program does not provide medical advice.

Storage:

Keep this medicine out of reach and sight of children.

Do not use this medicine after the expiration date which is stated on the pen or syringe label and outer carton after 'EXP'.

Store in a refrigerator between 2 and 8 °C (36 to 46 °F). Do not freeze. Do not use if Skyrizi has been frozen.

Keep in the original carton in order to protect from light.

The liquid should look clear to yellow. The liquid may contain tiny white or clear particles. Do not use if liquid is cloudy or contains flakes or large particles.

This medicine is for single use only. Ask your doctor, pharmacist or nurse how to throw away used pens and syringes safely.

If you want more information about Skyrizi:

- Talk to your healthcare professional.
- Find the full product monograph that is prepared for healthcare professionals and includes this Patient Medication Information by visiting the Health Canada website (<https://www.canada.ca/en/health-canada/services/drugs-health-products/drug-products/drug-product-database.html>); the manufacturer's website (www.abbvie.ca), or by calling 1-888-704-8271.

This leaflet was prepared by AbbVie Corporation.

Last Revised: March 16, 2022

PATIENT MEDICATION INFORMATION

READ THIS FOR SAFE AND EFFECTIVE USE OF YOUR MEDICINE

SKYRIZI®

risankizumab injection

75 mg in 0.83 mL sterile solution (90 mg/mL) subcutaneous injection

Read this carefully before you start taking Skyrizi and each time you get a refill. This leaflet is a summary and will not tell you everything about this drug. Talk to your healthcare professional about your medical condition and treatment and ask if there is any new information about Skyrizi.

What is Skyrizi used for?

- Skyrizi is a prescription medicine used to treat adults with moderate to severe plaque psoriasis, an inflammatory condition affecting the skin and nails. Plaque psoriasis can cause raised, thick, red and scaly patches (“psoriatic lesions”) that can appear anywhere on your body.
- Skyrizi is used to treat adults with active psoriatic arthritis. Psoriatic arthritis is an inflammatory disease of the joints, usually accompanied by psoriasis. Psoriatic arthritis can cause pain, swelling and stiffness in the joints, in addition to a disruption in daily activities and fatigue. If you have active psoriatic arthritis, you will be given Skyrizi alone or in combination with a conventional Disease Modifying Anti-Rheumatic Drug (DMARD), such as methotrexate.

How does Skyrizi work?

Skyrizi contains the active substance risankizumab. This medicine works by stopping a protein in the body called IL-23, which causes inflammation.

Plaque Psoriasis

Skyrizi reduces inflammation and can therefore help to improve skin clearance and the appearance of nails. It also reduces symptoms of plaque psoriasis such as burning, itching, pain, redness and scaling.

Psoriatic Arthritis

Skyrizi reduces the inflammation and can therefore help to reduce pain, stiffness, and swelling in and around your joints, pain and stiffness in your spine, psoriatic skin rash, psoriatic nail damage, and it may limit damage to the bone and cartilage in your joints. These effects can ease your normal daily activities, reduce tiredness, and improve your quality of life.

What are the ingredients in Skyrizi?

Medicinal ingredient: risankizumab

Non-medicinal ingredients: disodium succinate hexahydrate, polysorbate 20, sorbitol, succinic acid, and water for injection.

Skyrizi comes in the following dosage forms:

Pre-filled syringe with 75 mg of risankizumab in 0.83 mL of solution for injection (90 mg/mL).

Skyrizi is a clear and colourless to slightly yellow liquid in a pre-filled syringe with needle guard. Each carton contains 2 pre-filled syringes.

Do not use Skyrizi if:

- You are allergic to risankizumab or any of the other ingredients of this medicine. See **What are the ingredients in Skyrizi?**

To help avoid side effects and ensure proper use, talk to your healthcare professional before you take Skyrizi. Talk about any health conditions or problems you may have, including if you:

- currently have an infection or if you have an infection that keeps coming back. Skyrizi may lower your ability to fight infections and may increase your risk of infections.
- have tuberculosis (TB) or have been in close contact with someone with TB.
- have recently received or plan to receive an immunization (vaccine). You should not be given certain types of vaccines (called 'live vaccines') while using Skyrizi.

Talk to your healthcare professional right away if you have any of the symptoms of serious infection:

- fever, flu-like symptoms, night sweats
- feeling tired or short of breath
- cough
- blood in your phlegm (mucus)
- warm, red or painful skin, sores on your body different from your psoriasis, or a painful skin rash with blisters
- muscle aches
- weight loss

Talk to your healthcare professional right away if you have any of the symptoms of an allergic reaction, including:

- difficulty breathing or swallowing
- swelling of the face, lips, tongue or throat
- severe itching of the skin, with a red rash or raised bumps

Other warnings you should know about:

Skyrizi is not approved for children and adolescents under 18 years of age. This is because it has not been studied in this age group.

If you are pregnant, think you may be pregnant or are planning to have a baby, ask your doctor for advice before using this medicine. This is because it is not known if Skyrizi can harm your unborn baby. If you are a woman of childbearing potential, use adequate contraception while using Skyrizi and for at least 20 weeks after the last Skyrizi dose. Talk to your doctor about your contraception options.

If you are breastfeeding or are planning to breastfeed, talk to your doctor before using this medicine. It is not known if Skyrizi passes into breast milk. You and your doctor should decide if you will breastfeed while using Skyrizi.

Tell your healthcare professional about all the medicines you take, including any drugs, vitamins, minerals, natural supplements or alternative medicines.

How to take Skyrizi:

- Always use this medicine exactly as your doctor, pharmacist or nurse has told you. Check with your doctor, pharmacist or nurse if you are not sure how to use this medicine.
- Skyrizi is given as 2 injections under your skin (called “subcutaneous injections”).
- You and your doctor, pharmacist or nurse will decide if you should inject Skyrizi yourself. Do not inject yourself with this medicine unless you have been trained by your doctor, pharmacist or nurse. A caregiver may also give your injections after training. The AbbVie Care patient assistance program is also available to you if you require assistance with injections should you prefer nurse-administered injections.
- **For a more comfortable injection:** Take the carton out of the refrigerator and leave it at room temperature, out of direct sunlight, for **15 to 30 minutes** before injecting.

Read the “**Instructions for Use**” before injecting Skyrizi yourself.

Usual dose:

The dose is 150 mg given as two 75 mg injections.

	How much?	When?
1st dose	150 mg (two 75 mg injections)	When your doctor tells you
2nd dose	150 mg (two 75 mg injections)	4 weeks after 1 st dose
Further doses	150 mg (two 75 mg injections)	Every 12 weeks starting after 2 nd dose

Do not stop using Skyrizi without talking to your doctor first. If you stop treatment, your symptoms may come back.

Overdose:

If you think you have taken too much Skyrizi or the dose has been given sooner than prescribed, talk to your doctor.

Missed dose:

If you forgot to use Skyrizi, inject a dose as soon as you remember. Then, take your next dose at your regular scheduled time. Talk to your doctor if you are not sure what to do.

What are possible side effects from using Skyrizi?

These are not all the possible side effects you may have when taking Skyrizi. If you experience any side effects not listed here, contact your doctor. Your doctor will decide if you can keep using Skyrizi.

Tell your doctor, pharmacist or nurse if you get any of the following side effects:

Very common: may affect more than 1 in 10 people

- upper respiratory infections with symptoms such as sore throat and stuffy nose

Common: may affect up to 1 in 10 people

- feeling tired
- fungal skin infection
- injection site reactions
- headache
- itching
- burning when you urinate or urinating more often than normal

Uncommon: may affect up to 1 in 100 people

- small raised red bumps on the skin

Instructions for Use

Skyrizi®

(risankizumab injection)

150 mg in 1 mL sterile solution (150 mg/mL) subcutaneous injection

Pre-filled pen

Please read complete instructions before using Skyrizi.

Skyrizi pre-filled pen

Important information to know before you inject Skyrizi

- Receive training on how to inject Skyrizi before giving an injection. Talk to your doctor, pharmacist or nurse if you need help.
- Mark the dates on your calendar so you know when to next use Skyrizi.
- Keep Skyrizi in the original carton to protect from light until it is time to use it.
- Take the carton out of the refrigerator and leave it at room temperature, out of direct sunlight, for **30 to 90 minutes** before injecting.
- **Do not** inject if the liquid in the inspection window is cloudy or contains flakes or large particles. The liquid should look clear to yellow and may contain tiny white or clear particles.
- **Do not** use if expiration date (EXP) has passed.
- **Do not** use if liquid has been frozen (even if thawed).
- **Do not** shake the pen.
- **Do not** use if pen has been dropped or damaged.
- **Do not** use if the carton perforations are broken. Return this medicine to the pharmacy.

- **Do not** remove the dark gray cap until just before the injection.

Storage Information

Store in refrigerator between 2 and 8 °C (36 to 46 °F). Do not freeze. Keep Skyrizi out of reach and sight of children. Keep Skyrizi pre-filled pen in the original carton to protect from light.

Follow the steps below each time you use Skyrizi

Prepare for Injection

STEP 1

Take the carton out of the refrigerator and leave it at room temperature, out of direct sunlight, for **30 to 90 minutes** before injecting.

- **Do not** remove the pen from the carton while allowing Skyrizi to reach room temperature.
- **Do not** warm Skyrizi in any other way. For example, do not warm it in a microwave or in hot water.
- **Do not** use the pen if liquid has been frozen, even if it has been thawed.

STEP 2

You will need these supplies:

- 1 pre-filled pen

Not provided in the Skyrizi carton:

- 1 alcohol pad
- 1 cotton ball or gauze pad
- special disposal container

Place these items on a clean, flat surface.

Wash and dry your hands.

STEP 3

Areas to inject

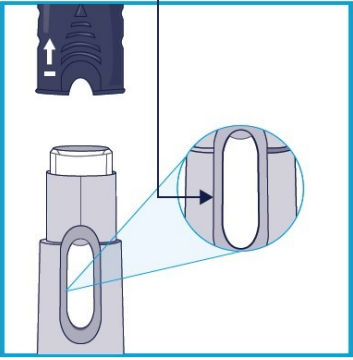

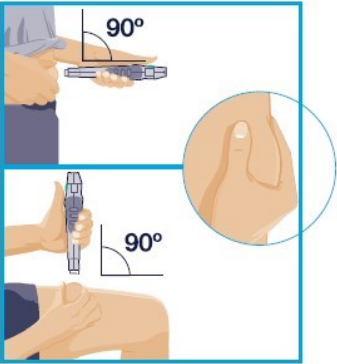

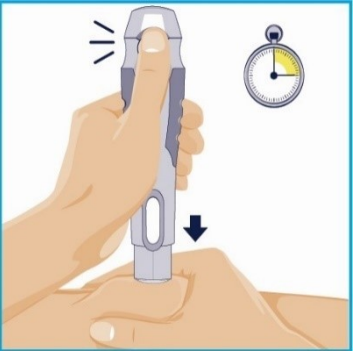

Areas to inject

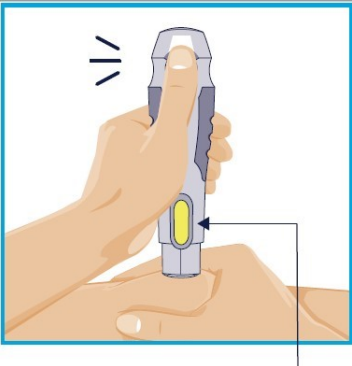

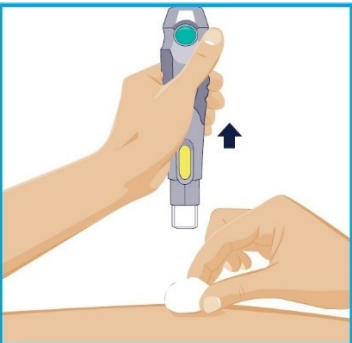

Choose from these 3 areas to inject:

- front of left thigh or right thigh
- belly (abdomen) at least 5 cm (2 inches) from the belly button (navel)

Before the injection, wipe where you will inject in a circular motion with an alcohol pad.

- **Do not** touch or blow on the injection site after it is cleaned. Allow the skin to dry before injecting.
- **Do not** inject through clothes.
- **Do not** inject into skin that is sore, bruised, red, hard, scarred, or has stretch marks.
- **Do not** inject into areas affected by psoriasis.

<p>STEP 4</p> <p>Check liquid</p> 	<p>Hold the pen with the dark gray cap pointing up, as shown.</p> <ul style="list-style-type: none"> • Pull the dark gray cap straight off. • Throw the dark gray cap away. <p>Check the liquid through the inspection window.</p> <ul style="list-style-type: none"> • It is normal to see bubbles in the liquid. • The liquid should look clear to yellow and may contain tiny white or clear particles. • Do not use if the liquid is cloudy or contains flakes or large particles.
<p>STEP 5</p> <p>Abdomen or Thigh</p> 	<ul style="list-style-type: none"> • Hold the pen with your fingers on the gray hand grips. • Turn the pen so that the white needle sleeve points toward the injection site and you can see the green activator button. • Gently squeeze the skin at your injection site to make a raised area and hold it firmly. • Place the white needle sleeve straight (90° angle) against the raised injection site.
<p>Inject Skyrizi</p> <p>STEP 6</p> <p>First “click” 15 seconds</p> 	<p>Hold the pen so that you can see the green activator button and inspection window.</p> <p>Push and keep pressing the pen down against the raised injection site.</p> <ul style="list-style-type: none"> • The pen will activate only if the white needle sleeve is pressed down against the injection site before pressing the green activator button. <p>Press the green activator button and hold the pen for 15 seconds.</p> <ul style="list-style-type: none"> • A loud “click” means the start of the injection.

<p>STEP 7 Second “click”</p>  <p>Yellow indicator</p>	<p>Keep pressing the pen down against the injection site.</p> <p>The injection is complete when:</p> <ul style="list-style-type: none"> • the pen has made a second “click” or • the yellow indicator has filled the inspection window. <p>This takes up to 15 seconds.</p>
<p>STEP 8</p> 	<p>When the injection is complete, slowly pull the pen out from the skin.</p> <p>The white needle sleeve will cover the needle tip and make another “click.”</p> <p>After completing the injection, place a cotton ball or gauze pad on the skin at the injection site.</p> <ul style="list-style-type: none"> • Do not rub the injection site. • Slight bleeding at the injection site is normal.
<p>After your Injection</p> <p>STEP 9</p> 	<p>Throw away the used pen in a special disposal container right away after use.</p> <ul style="list-style-type: none"> • Do not throw away the used pen in the household waste. • Your doctor, pharmacist or nurse will tell you how to return the full special disposal container.

Instructions for Use
Skyrizi®
(risankizumab injection)
150 mg in 1 mL sterile solution (150 mg/mL) subcutaneous injection
Pre-filled syringe

Please read complete instructions before using Skyrizi.

Skyrizi pre-filled syringe

Important information to know before you inject Skyrizi

- If your doctor decides that you or a caregiver may be able to give your injections at home, you and your caregiver should receive training on how to inject Skyrizi before giving an injection. Injections should be given in the thighs or abdomen. Caregivers can also give Skyrizi in the upper outer arm. Talk to your doctor, pharmacist or nurse if you need help. The AbbVie Care patient assistance program is also available to you if you require assistance with injections should you prefer nurse-administered injections.
- Mark the dates on your calendar so you know when to next use Skyrizi.
- Keep Skyrizi in the original carton to protect from light until it is time to use it.
- **Do not** inject if the liquid is cloudy or contains flakes or large particles. The liquid should look clear to yellow and may contain tiny white or clear particles.
- **Do not** use if the expiry date (EXP) has passed.
- **Do not** use if the liquid has been frozen (even if thawed).
- **Do not** shake the syringe.
- **Do not** use if the syringe has been dropped or damaged.
- **Do not** use if the carton perforations are broken. Return this medicine to the pharmacy.
- **Do not** remove the needle cover until just before the injection.

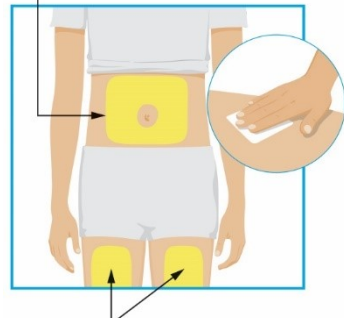

For a more comfortable injection: Take the carton out of the refrigerator and leave it at room temperature, out of direct sunlight, for **15 to 30 minutes** before injecting.

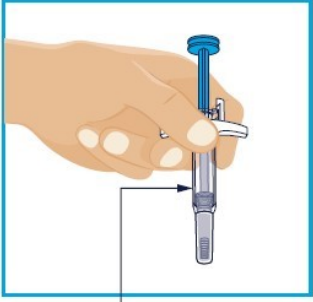

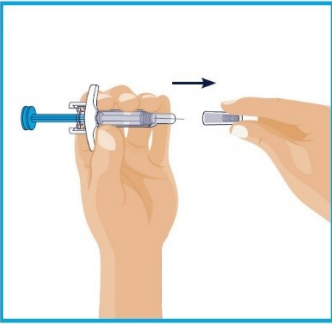

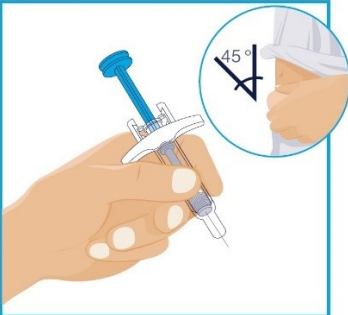

- **Do not** remove the syringe from the carton until ready to inject.
- **Do not** warm Skyrizi in any other way. For example, **do not** warm it in a microwave or in hot water.

Storage Information

Store in refrigerator between 2 and 8 °C (36 to 46 °F). Do not freeze. Keep Skyrizi out of reach and sight of children. Keep Skyrizi pre-filled syringe in the original carton to protect from light.

Follow the steps below each time you use Skyrizi

Prepare for Injection	
<p>STEP 1</p> 	<p>You will need these supplies:</p> <ul style="list-style-type: none"> • 1 pre-filled syringe – remove it from the cardboard sleeve by holding the finger grip. Do not hold or pull plunger rod when removing the pre-filled syringe from the sleeve. <p>Not provided in the Skyrizi carton:</p> <ul style="list-style-type: none"> • 1 alcohol pad • 1 cotton ball or gauze pad • special disposal container <p>Place these items on a clean, flat surface. Wash and dry your hands.</p>
<p>STEP 2</p> <p>Areas to inject</p>  <p>Areas to inject</p>	<p>Choose from these 3 areas to inject:</p> <ul style="list-style-type: none"> • front of left thigh or right thigh • belly (abdomen) at least 5 cm (2 inches) from the belly button (navel) <p>Before the injection, wipe where you will inject in a circular motion with an alcohol pad.</p> <ul style="list-style-type: none"> • Do not touch or blow on the injection site after it is cleaned. Allow the skin to dry before injecting. • Do not inject through clothes. • Do not inject into skin that is sore, bruised, red, hard, scarred, or has stretch marks. • Do not inject into areas affected by psoriasis.

<p>STEP 3</p>  <p>Check liquid</p>	<p>Hold the syringe with covered needle pointing down, as shown. Check the liquid in the syringe.</p> <ul style="list-style-type: none"> • It is normal to see bubbles in the window. • The liquid should look clear to yellow and may contain tiny white or clear particles. • Do not use if the liquid is cloudy or contains flakes or large particles.
<p>STEP 4</p> 	<p>Removing the needle cover:</p> <ul style="list-style-type: none"> • Hold the syringe in one hand between the finger grip and needle cover. • With the other hand, gently pull the needle cover straight off. • Do not hold or pull plunger rod when removing the needle cover. • You may see a drop of liquid at the end of the needle. This is normal. • Throw away the needle cover. • Do not touch the needle with your fingers or let the needle touch anything.
<p>Inject Skyrizi</p>	
<p>STEP 5</p> 	<p>Hold the body of the syringe in one hand between the thumb and index finger, like you would a pencil. Gently pinch the area of cleaned skin with your other hand and hold it firmly. Insert the needle all the way into the skin at about a 45-degree angle using a quick, short movement. Keep the syringe steady at the same angle.</p>

STEP 6

Needle guard

Slowly push the plunger rod all the way in until all of the liquid is injected.

Pull the needle out of the skin while keeping the syringe at the same angle.

Slowly take your thumb off the plunger rod. The needle will then be covered by the needle guard.

- The needle guard will not activate unless all the liquid is injected.
- Speak to your doctor, pharmacist or nurse if you think you have not given a full dose.

Press a cotton ball or gauze pad where you have injected and hold for 10 seconds.

Do not rub the skin where you have injected. You may have slight bleeding from where you injected. This is normal.

After injection**STEP 7**

Throw away the used syringe in a special disposal container right away after use.

- **Do not** throw away the used syringe in the household waste.
 - Your doctor, pharmacist or nurse will tell you how to return the full special disposal container.
-

- **Do not** use if the liquid has been frozen (even if thawed).
- **Do not** shake the syringe.
- **Do not** use if the syringe has been dropped or damaged.
- **Do not** use if the syringe tray cover is broken or missing. Return this medicine to the pharmacy.
- **Do not** remove the needle cover until just before the injection.

For a more comfortable injection: Take the carton out of the refrigerator and leave it at room temperature, out of direct sunlight, for **15 to 30 minutes** before injecting.

- **Do not** remove the syringes from the carton until ready to inject.
- **Do not** warm Skyrizi in any other way. For example, **do not** warm it in a microwave or in hot water.

Storage Information

Store in refrigerator between 2 and 8 °C (36 to 46 °F). Do not freeze. Keep Skyrizi out of reach and sight of children. Keep Skyrizi pre-filled syringe in the original carton to protect from light.

Follow the steps below each time you use Skyrizi

Prepare for Injection

STEP 1

You will need these supplies:

- 2 pre-filled syringes

Not provided in the Skyrizi carton:

- 2 alcohol pads
- 2 cotton balls or gauze pads
- Special disposal container

Place these items on a clean, flat surface.

Wash and dry your hands.

Start with one syringe for the first injection.

For a full dose, 2 injections are required, one after the other.

STEP 2

Areas to inject

Areas to inject

Choose from these 3 areas to inject:

- front of left thigh or right thigh
- belly (abdomen) at least 5 cm (2 inches) from the belly button (navel)

For the second syringe, inject at least 3 cm (1 inch) away from the first injection. **Do not** inject into the same place.

Before each injection, wipe where you will inject in a circular motion with an alcohol pad.

- **Do not** touch or blow on the injection site after it is cleaned. Allow the skin to dry before injecting.
- **Do not** inject through clothes.
- **Do not** inject into skin that is sore, bruised, red, hard, scarred, or has stretch marks.
- **Do not** inject into areas affected by psoriasis.

STEP 3

Check liquid

Hold the syringe with covered needle pointing down, as shown.

Check the liquid in the syringe.

- It is normal to see bubbles in the window.
- The liquid should look clear to slightly yellow and may contain tiny white or clear particles.
- **Do not** use if the liquid is cloudy or contains flakes or large particles.

STEP 4

Removing the needle cover:

- Hold the syringe in one hand between the finger grip and needle cover.
- With the other hand, gently pull the needle cover straight off.
- **Do not** hold or pull plunger rod when removing the needle cover.
- You may see a drop of liquid at the end of the needle. This is normal.
- Throw away the needle cover.
- **Do not** touch the needle with your fingers or let the needle touch anything.

Inject Skyrizi**STEP 5**

Hold the body of the syringe in one hand between the thumb and index finger, like you would a pencil.

Gently pinch the area of cleaned skin with your other hand and hold it firmly.

Insert the needle all the way into the skin at about a 45-degree angle using a quick, short movement. Keep the syringe steady at the same angle.

STEP 6

Needle guard

Slowly push the plunger rod all the way in until all of the liquid is injected.

Pull the needle out of the skin while keeping the syringe at the same angle.

Slowly take your thumb off the plunger rod. The needle will then be covered by the needle guard.

- The needle guard will not activate unless all the liquid is injected.
- Speak to your doctor, pharmacist or nurse if you think you have not given a full dose.

Press a cotton ball or gauze pad where you have injected and hold for 10 seconds.

Do not rub the skin where you have injected. You may have slight bleeding from where you injected. This is normal.

STEP 7

For a full dose, two injections are needed, one after the other.

- Repeat Steps 2 through 6 with the second syringe.
- Inject the second syringe immediately after the first injection, at least 3 cm away from the first injection.

After your Injection**STEP 8**

Throw away used syringes in a special disposal container right away after use.

- **Do not** throw away used syringes in the household waste.
- Your doctor, pharmacist or nurse will tell you how to return the full special disposal container.
